

VERDANT

Product Evolution: V0.1 → V2.0

Product Vision

Verdant is an AI-powered interview preparation platform that interviews you, understands where you are weak, teaches you what to improve, and continuously adapts your preparation until you become interview-ready.

AI Interview Simulator → Personalized Interview Platform → AI Interview Coach

Version	What Verdant is	Main user value
V0.1	AI Mock Interview	Practice an interview
V0.2	Private Beta	Validate real user demand
V1.0	Public Interview Platform	Reliable interview practice
V1.1	Paid Interview Platform	Premium preparation
V1.2	Personalized Interview Platform	Interview based on the candidate
V1.3	AI Voice Interviewer	Practice speaking naturally
V2.0	AI Interview Coach	Continuously improve until interview-ready

V0.1 — Core Interview MVP

Goal: Build the smallest version that proves people want Verdant.

What you're building

- Signup, login, logout, and session management.
- Interview setup: role, experience, difficulty, and Technical / Behavioral / Mixed.
- AI interviewer that generates questions, asks them sequentially, accepts answers, and evaluates them.
- Interview feedback: overall score, technical knowledge, communication, problem solving, answer quality, confidence, strengths, weaknesses, and improvement suggestions.
- Interview history with previous interviews, scores, questions, answers, and feedback.
- Limited free usage with server-side enforcement.

User flow

- Sign up → Choose role → Choose experience → Choose difficulty → Choose interview type → Start AI interview → Answer questions → AI evaluation → Results → Review interview.

Do not build yet

- Voice, video, resume analysis, RAG, company-specific preparation, AI study coach, complex analytics.

Definition

- I can practice a complete interview with an AI and understand how I performed.

V0.2 — Private Beta

Goal: Put Verdant in front of real people and learn from usage.

What you're building

- Production-quality landing page: hero, product preview, problem, how it works, features, who it is for, roles, pricing communication, honest FAQ, CTA, and footer.
- Better onboarding and first-time user experience.
- Post-interview feedback form.
- Bug reporting and basic product analytics.
- Responsive and accessibility improvements.

Primary question

- Do people actually want to practice interviews this way?

Important constraint

- Do not use fake testimonials, user counts, ratings, logos, success percentages, or other fabricated social proof.

Definition

- Real users can use Verdant and tell us whether it is useful.

V1.0 — Public Launch

Goal: Make Verdant reliable enough for anyone to use.

What you're building

- Production error handling and recovery.
- API rate limiting, authorization, security, secrets/environment audit.
- AI failure recovery and useful loading/empty states.
- Monitoring, mobile QA, SEO, privacy policy, and terms.
- Production smoke tests and launch/rollback process.

User experience

- Landing page → Sign up → Onboarding → Choose interview → AI interview → AI evaluation → Detailed feedback → Interview history.

Definition

- Anyone can discover, sign up, and complete a reliable AI interview.

V1.1 — Monetization

Goal: Find out whether Verdant can become a business.

What you're building

- Free and Pro entitlement model.
- Pricing page/section.
- Subscription database model.
- Payment provider checkout.
- Subscription webhooks.
- Server-side feature gating.
- Upgrade flow and subscription/account management.

Product model

- Free = basic practice. Pro = serious interview preparation.

Core loop

- Free interview → User experiences value → Free limit → Upgrade → Premium preparation.

Definition

- People are willing to pay for better interview preparation.

V1.2 — Personalized Interview Platform

Goal: Make Verdant understand the candidate instead of giving everyone the same interview.

Resume Intelligence

- Resume upload and secure storage.
- Extract resume text.
- Parse skills, experience, projects, education, technologies, and achievements.
- Use resume context to generate personalized interview questions.

RAG / Knowledge System

- Use PostgreSQL + pgvector initially.
- Chunk and embed resume/knowledge content.
- Retrieve relevant context for interviews.
- Build an interview knowledge base covering areas such as DSA, backend, frontend, databases, system design, OS, networking, and behavioral topics.

Personalized feedback

- Combine resume, target role, experience, interview history, previous weaknesses, and relevant knowledge.
- Produce specific feedback rather than generic advice.

Definition

- Verdant understands the candidate instead of giving everyone the same interview.

V1.3 — Voice Interview

Goal: Let candidates practice an interview by actually talking to an AI interviewer.

What you're building

- Microphone permission UX.
- Speech-to-text.
- Text-to-speech AI interviewer.
- Voice interview prototype.
- Conversation state and real-time turn handling.
- Interruption/retry handling.
- Transcript persistence.
- Voice cost and latency instrumentation.
- Communication and voice-oriented feedback.
- Cross-browser QA and production fallback.

Experience

- AI asks a question → Candidate speaks → Verdant listens → AI understands → AI responds/follows up → Candidate continues.

Feedback

- Speaking pace, pauses, answer clarity, answer structure, communication, and AI-estimated confidence indicators.

Definition

- You can practice an interview by actually talking to an AI interviewer.

V2.0 — Verdant AI Interview Coach

Goal: Turn Verdant from an interview simulator into a continuous interview-preparation coach.

Candidate profile

- Target role, experience, resume, skills, interview history, scores, strengths, weaknesses, communication patterns, technical gaps, and preparation goal.

Readiness score

- Aggregate actual interview history into a readiness view across areas such as technical knowledge, communication, problem solving, and confidence.
- Do not present unsupported scientific precision or fake benchmarks.

Weakness engine

- Detect repeated weaknesses across interviews.
- Rank weaknesses by severity and recurrence.
- Show patterns such as recurring difficulty with system-design tradeoffs.
- Use weaknesses to influence future interview generation.

Personalized study plan

- Generate a plan around the candidate's target role and deadline.
- Include learning, practice, and mock interviews.
- Adapt the plan based on new performance.

AI study coach

- Explain concepts.
- Generate targeted questions.
- Evaluate answers.
- Identify remaining gaps.
- Recommend another exercise when the candidate still struggles.

Targeted practice

- Turn weaknesses into focused practice sessions instead of random interviews.

Company preparation

- Eventually combine company context, role, experience, resume, and weaknesses into a preparation experience.
- Use reliable information and clearly distinguish sourced facts from AI-generated preparation.

Definition

- Verdant continuously understands what the candidate needs to improve and guides them toward interview readiness.

The Complete Verdant Experience

Candidate Profile → Resume + Target Role + Experience → AI Interview → Text/Voice → AI Evaluation → Strengths/Weaknesses/Scores → Weakness Engine → Personalized Plan → Learning + Practice + Coaching → Better Interview → Re-evaluate.

Product Strategy

Version	Question it must answer
V0.1	Can I practice?
V0.2	Is this actually useful?
V1.0	Can anyone use it reliably?
V1.1	Will someone pay for it?
V1.2	Can Verdant understand me?
V1.3	Can Verdant interview me naturally?
V2.0	Can Verdant actually coach me to become interview-ready?

Core principle: Build → Launch → Get users → Learn → Improve → Monetize → Expand.

Do not build V2.0 features early simply because they are technically exciting. Each version should earn the right to become more sophisticated based on real user behavior and, later, willingness to pay.
